

ABSTRACT

A hand-held scrubbing device for cleaning a surface has a waterproof casing having an interior area and an exterior area. The interior area has an electromechanical motor and a battery joined to the electromechanical motor. The exterior area has a scrubbing surface removably joined to the electromechanical motor which provides a mechanical action to the scrubbing surface. The scrubbing surface is impregnated with a cleaning composition. A kit has a hand-held scrubbing device, while a method of use employs such a hand-held scrubbing device. A disposable scrubbing surface impregnated with a cleaning composition is designed for use with a hand-held scrubbing device.
